HIT: Treatment Paradoxes

- Clotting disorder, not bleeding disorder
- Platelet transfusion can increase thrombosis risk
- Simply stopping heparin may not prevent thrombosis
- Warfarin contraindicated as acute monotherapy

Clinical Diagnosis of HIT Degree of thrombocytopenia

- ◆ >50% fall in platelet count - not absolute thrombocytopenia
- ◆ Smaller falls may occur
- ◆ Diagnosis more difficult after bypass surgery
 - Transient thrombocytopenia is normal
 - Pre- and post-op heparin use (difficult to determine appropriate "pre-heparin" platelet count)

Clinical	Pathologic
Thrombocytopenia	Thrombocytopenia
... (text is very small and blurry)	... (text is very small and blurry)

What is heparin-induced thrombocytopenia and how is it treated. What do you give for heparin induced thrombocytopenia.
